PROFESSIONAL SUMMARY

- 10+ years of automation testing/leading experience in SDLC through different layers of the software system architecture - User Interface (**UI**), Business logic layer (**API**) and backend Servers (**Database**).
- Proficient in developing & implementing test automation framework and designing automation tests in **Java / Python** for automating web application using **Selenium** WebDriver, Mobile automation using **Appium** and API automation using **Postman, REST Assured, Cucumber & TestNG**.
- Experienced in **iOS & Android** native automation frameworks.
- Seasoned in integrating / Implementing Automation Testing with **CI/CD** using **Jenkins** and **GitHub Actions**.
- Expertise in network call/API validations using **Charles Proxy** and **selenium-wire**.
- Strongly experienced in SQL and NoSQL Database testing. Including MongoDB, Salesforce CRM DB and AWS DynamoDB.
- Experienced in manual testing of CE platforms like Smart TV, Apple TV, Amazon Alexa, Google echo dot, Apple watch, etc. Testing Bluetooth connectivity between devices and airplay, chrome-cast testing for seamless integration.
- Experienced with AWS CloudWatch for testing and monitoring Lambda logs.
- Experienced testing **Android Auto and Apple CarPlay**.
- Proactive problem-solver backed by critical thinking to identify potential quality issues early and mitigate risks.
- Certified AWS AI Practitioner.

WORK EXPERIENCE

Hypergiant Industries Inc

August 2024 – May 2025

Senior SDET (Mobile and Web Automation)

Client : SiriusXM

With over 20 million monthly active users, SiriusXM reaches an audience of more than 150 million people with streaming music, AOD, VOD, and spoken word content. As a senior SDET, I drove culture of shared quality across the engineering organization through pragmatic test automation, collaborated and participated in manual testing, A/B testing, etc. I was responsible for product quality across supporting services and all platforms, including Android, iOS, and web applications. I lead a frontend automation team and led the effort to equip and optimize the Java, Selenium and Appium based automation framework while implementing a fast feedback loop to inform quality.

- Developed efficient and robust automation framework for UI testing for the SXM Native app.
- Matured framework to incorporate network testing for audio events and impressions using Charles proxy
- Implemented Page Object Model for multi-lingual application elements by integrating localization library support for audiences dispersed geographically
- Designed and maintained iOS automation test suite using Appium with Java and Carina framework for native audio streaming application
- Developed tests around native iOS Settings to replicate user interaction of cancelling subscription through iCloud
- Matured framework to work with external apps like Test flight, iOS Settings, AppStore and reliable across different device types – iPad and iPhone
- Responsible for Test and Defect management within the quality organization and define priorities.
- Monitored and reported on quality metrics, trends, and compliance status to senior management and project teams. Collaborated with developers to fulfill automation requirements.
- Implemented POC framework for web network call validations using **selenium-wire using python**
- Signed off on releases for cross-platform automation testing across different OS versions and devices

Fleet Services by Cox Automotive is the premier nationwide provider of scheduled and unscheduled maintenance for medium- and heavy-duty commercial fleets. It operates 25+ service centers across the U.S. equipped for everything from routine inspections to collision repair and full-scale refurbishment. **1,400+ technicians nationwide**, supported by **750+ mobile service trucks**—offering responsive maintenance.

The vehicle inspection/repair/maintenance technicians use TRAIT App on iOS Platform to log the findings from vehicle and the work performed. It tracks the Technician status and submits customer quotes for approval for the estimated work needed on the vehicle. Customer includes retail giants like Amazon.

- Lead Automation Testing effort for the critical TRAIT mobile application
- Follow Agile Testing Methodology, participate and represent Automation team in daily scrum meeting
- Involved in framing Test Automation strategy for the client application
- Design data driven Test Automation framework for Mobile, Web & API client
- Develop, design and maintain unified automation test scripts using Java, Selenium, Appium for iOS and Web Platform using Real device and Simulator/Emulator device
- Logs checking using AWS CloudWatch. API Testing and validation using DynamoDB and Rest Assured/Postman.
- Perform functional regression, sanity, smoke testing
- Participate in manual release production testing as part of bug-hunt activities
- Develop, maintain and monitor Production Sanity Test suite
- Work with several development teams and manual testing team in the left shift testing Approach
- Responsible for providing automation sign offs on regression testing effort
- Involved in Test Automation framework enhancement and maintenance
- Conduct Automation Test script review
- Continuous monitoring of CICD jobs and analysis of the failures on Jenkins environment
- Report and track the defects using JIRA
- Report Automation team's task status/progress/concern to the management and devise mitigation plan
- A/B Testing using Optimizely Feature Flags

Senior QA Automation Engineer (Mobile and Web Automation)

Client: Fidelity Investments

Fidelity Investment's redesign project for updating the UI of their Student Debt Retirement program to facilitate their clients to provide their employees having student loans with a great 401K benefit plan towards their retirement savings.

- Work in a highly agile and fast paced environment to continuously deliver features of the redesigned UI application
- Automate the UI functional flows using **JavaScript** and **Playwright**
- Configuration and scheduling of Jenkins runs
- Triaging automation runs and bug logging and tracking using JIRA
- Follow STLC standards and practices to sign-off on the user stories
- Troubleshoot automation framework and design framework enhancements
- Write manual testcases in JIRA using XRAY plugin and Cucumber testcases for automation
- Creation and execution of Test Runs in JIRA
- Demonstrate features implemented and tested in current sprint cycle to all stakeholders

- Sign-off on the new implemented user stories
- Active participation in sprint cycle – sprint planning, backlog refinement, sprint demos, sprint retrospective meetings and daily stand -up meetings

Pandora Media Inc.

March 2019-March 2023

Senior QA Automation Engineer (Lead Ads Features Mobile Automation, BDD, Native Automation Framework)

Ads on Pandora had a turnover of **\$1.1 Billion** for the year 2022 with 4 major Ad types: Audio ads contributing to \$837M, Display ads - \$193M, Video ads - \$91M and Rewarded ads - \$46M.

- Led a team of 4 automation engineers as a subject matter expert on Ads Monetization Features
- Spearheaded several automation POCs and to present ROI to management and peers
- Customized automation framework for ads impression/monetization testing for a diverse customer demographic test data
- Integrated Charles Proxy in the automation Framework for tracker testing to verify calls to & from ads backend engines
- Standardized best automation practices and formulated automation testing strategies for different ad products/projects/releases, etc. Drafted Request for Proposals (RFPs) for Ads Automation approach.
- Adapted native test infrastructure Xcode & Swift to merge into the development ecosystem
- Migrated from Jenkins to GitHub Actions for CI testing (continuous integration)
- Adopted BDD Cucumber in Framework and customized Gherkin "grammar" system to reduce duplication in test definitions
- Created Appium functional tests for Android and iOS using Cucumber with Java
- POC of automation feasibility with Playwright and JavaScript
- Improved scalability, maintainability and ease of triaging test code
- Automated A/B experiment by integrating user whitelisting mechanism with the automation framework
- Integrated different tools/framework within the automation to accommodate various testing needs.
- Configuration and triaging of CI/CD pipelines
- Creating, triaging and maintaining automation tests for UI and tracker testing for sanity, smoke and regression suites.

Quality Engineer III March 2019 - Feb 2021 (Mobile & Web Automation)

With over 20 million monthly active users, SiriusXM and Pandora reach an audience of more than 150 million people with streaming music, audio, video and spoken word content. The recommendation engine utilizes the listening history and serves curated content to the target audience. The apps provide ads and non-ads based tiers. Available across platforms - iOS, Android, Web, Consumer Electronics and Automotives.

- Primary automation engineer on several major feature areas like Digital Rights Management (DRM), Playback and Payments & Packaging.
- Undertook effort for automation tests reliability thereby achieving **>95% reliability** among each of the sanity, smoke and regression test suites.
- Automated test implementation and execution on mobile platforms - **iOS and Android** for daily, weekly and bi-monthly release signoffs
- Triage automation runs and Root cause analysis of test failures- Troubleshoot test ware failures and analysis, reporting & tracking of client bugs
- Creation, updation and maintenance of Test Data for automation tests using a set of internal data creation/whitelisting tools and services. Automated the process via exposed APIs to create data for automated scripts at runtime.
- Testing application on varied consumer electronic devices including smart TVs, watches, smart home devices like Amazon Alexa, Google Homes, 360L testing, Android Auto and Apple CarPlay.

AT&T, SingTel (Tech Mahindra)

August 2013- March 2019

Senior Software Engineer May 2017- March 2019 (Data Engineer, Framework Design)

AT&T is the leading provider of mobile services in the United States with a market share of about **44.8%** of wireless subscriptions. MyATT is the mobile app through which AT&T customers can log in to the portal and can perform

various activities related with their account, like making online payments, changing profile data, suspending services, viewing web usage, etc.

- Implementation of Web UI Automation Framework
- Participated in developing common Appium framework for both Android and IOS (team of 7)
- Troubleshooting and enhancement in various automation frameworks for Web and device application testing.
- Code upgrades to the driving engine of AutoMaTics(In-House automation testing tool) – to accommodate UI, API, DB testing, Web, Mobile testing
- Implementation of several frameworks for automating different data generation tools including SQL Database validations, REST and SOAP API Testing and UI testing.
- Managing Git and DB for inhouse tool- AutoMaTics.
- Creating automation suites for different testing phases – AT, IST, UAT and PVT.

Software Engineer August 2013- May 2017 (Web Automation, Data Automation)

- Automating test flows for web regression test suite as per assigned user stories using Selenium WebDriver
- Hands-on and adding onto Data Driven framework and Hybrid framework in Selenium Java
- Writing selenium-java and appium-java code to automate functional flows as per the framework.
- Code optimization: enhancement of Java based automation framework by making the functions more generic and reusable by other components to avoid code duplication – Enabling to create new testcases with minimal number of code lines.
- Actively participated in User Story walkthrough with the Product team for upcoming features, releases, enhancements
- Designed automation solution for TestNG based xml suites for different jobs like Regression and Smoke Test using VBScript
- Bug logging and tracking in QC
- As part of innovation initiative: Collaborated with other internal teams to evaluate automation scope for their work processes. Example: Automating test Data Request and Data Creation tools using MySQL, Oracle DB queries for AT&T Wireline data team – leading to time saving by ~**60%**.
- Keep up to date with best industry practices and share with the team

Singtel (Singapore Telecommunications) Mobile App Automation: My SingTel is the native mobile application through which SingTel customer can login to the portal and can perform various activities related to their account like making online payment, viewing and changing subscribed services, booking appointment into mobile store, etc.

- Automation tools and framework POC for My SingTel Native application – understanding the requirement and functionality of the application and set up a selenium-appium-java based hybrid framework.
- Understanding test scenarios and automating test case flows for web and mobile application.
- Enhancing and troubleshooting Appium based device testing framework.

SKILLS

- Programming Languages
 - Fluent: Java, SQL, Python
 - Skilled: Bash shell, Swift
 - Familiar: JS, C, VBA, HTML, JavaScript, Typescript
- Tools and IDEs: IntelliJ, SourceTree, Bitbucket, Jira, Charles Proxy, Test rail, HP QC, Jenkins, Postman, MongoDB, Visual Studio Code, Eclipse, Xcode, GitHub Actions, Oracle SQL Developer, AWS CloudWatch, DynamoDB, Salesforce
- Expertise in Web Automation testing using Selenium WebDriver with Java, Playwright with JavaScript, TestNG and Junit
- Expertise in Mobile Automation testing using Appium with Java
- Expertise in API validations using SOAPUI, Postman and Rest Assured libraries
- Fluent in network call validations and automation using Charles Proxy
- Experienced in software testing on varied Consumer Electronics, streaming services within Automotives, casting and connectivity between devices.
- Fluent with version management tools like GIT and SVN
- Well conceptualized with coding practices like Page Object Model, Page Factory, OOPs concepts

- Thorough with MySQL database testing and automation using SQL and JDBC
- Much experienced with API testing and automation using Postman and Rest Assured Java libraries
- Experienced with CI/CD systems such as Jenkins and GitHub Actions
- Thorough with Agile SDLC & STLC
- Experienced in automation testing of iOS applications using native tools: Xcode using Swift
- Well-practiced in Behavior-Driven Development
- Well versed with Test driven, Data driven and Hybrid automation frameworks

EDUCATION

Bachelors in Electronics & Telecommunication

2009-2013
